

SENIOR PHP DEVELOPER - BUCHAREST

CyBourn is a Managed Detection and Response (MDR) organization with a unique approach towards servicing clients. Our Security Operations Center (SOC) combines advanced monitoring services and threat detection capabilities with best-in-class business risk assessment to provide the optimal incident response approach for every client. We integrate threat intelligence, event monitoring, security analytics and incident response, while catalyzing machine learning and automation orchestration to detect targeted cyberattacks.

Application Process:

Please send cover letter and CV to talent@CyBourn.com

Role Overview:

We're looking for our next coding superhero. You'll be working with us to further create Etherlast, the future of cybersecurity solutions, targeted at corporate entities all over the world. A commitment to collaborative problem solving, sophisticated design, and product quality is essential.

Key Responsibilities

- Develop high-performance, reliable and maintainable code.
- Stay in-tune with the latest technologies; proactively identify areas for improvement and propose viable solutions.
- Collaborate with other technical team members to design, implement, quickly troubleshoot and resolve any critical issues.
- Collaborate with the design team, SOC analysts and Operations team to ensure requirements are met.

Requirements

- >3 years of solid development experience using web technologies.
- Extensive experience in design and development of web applications with PHP and GIT.
- Experience with MySQL and at least one PHP Framework (Laravel preferred).
- Solid foundations in computer science fundamentals, OOP, design patterns and software engineering best practices.
- Analytical thinking and strong initiative.
- Proactive and flexible, being able to self-manage.
- Experience with Laravel, the Elastic stack, Postgres, Perl, Agile Scrum;
- A solid understanding of High Availability, Load Balancing, Performance Tuning, Security.
- Conversational English.
